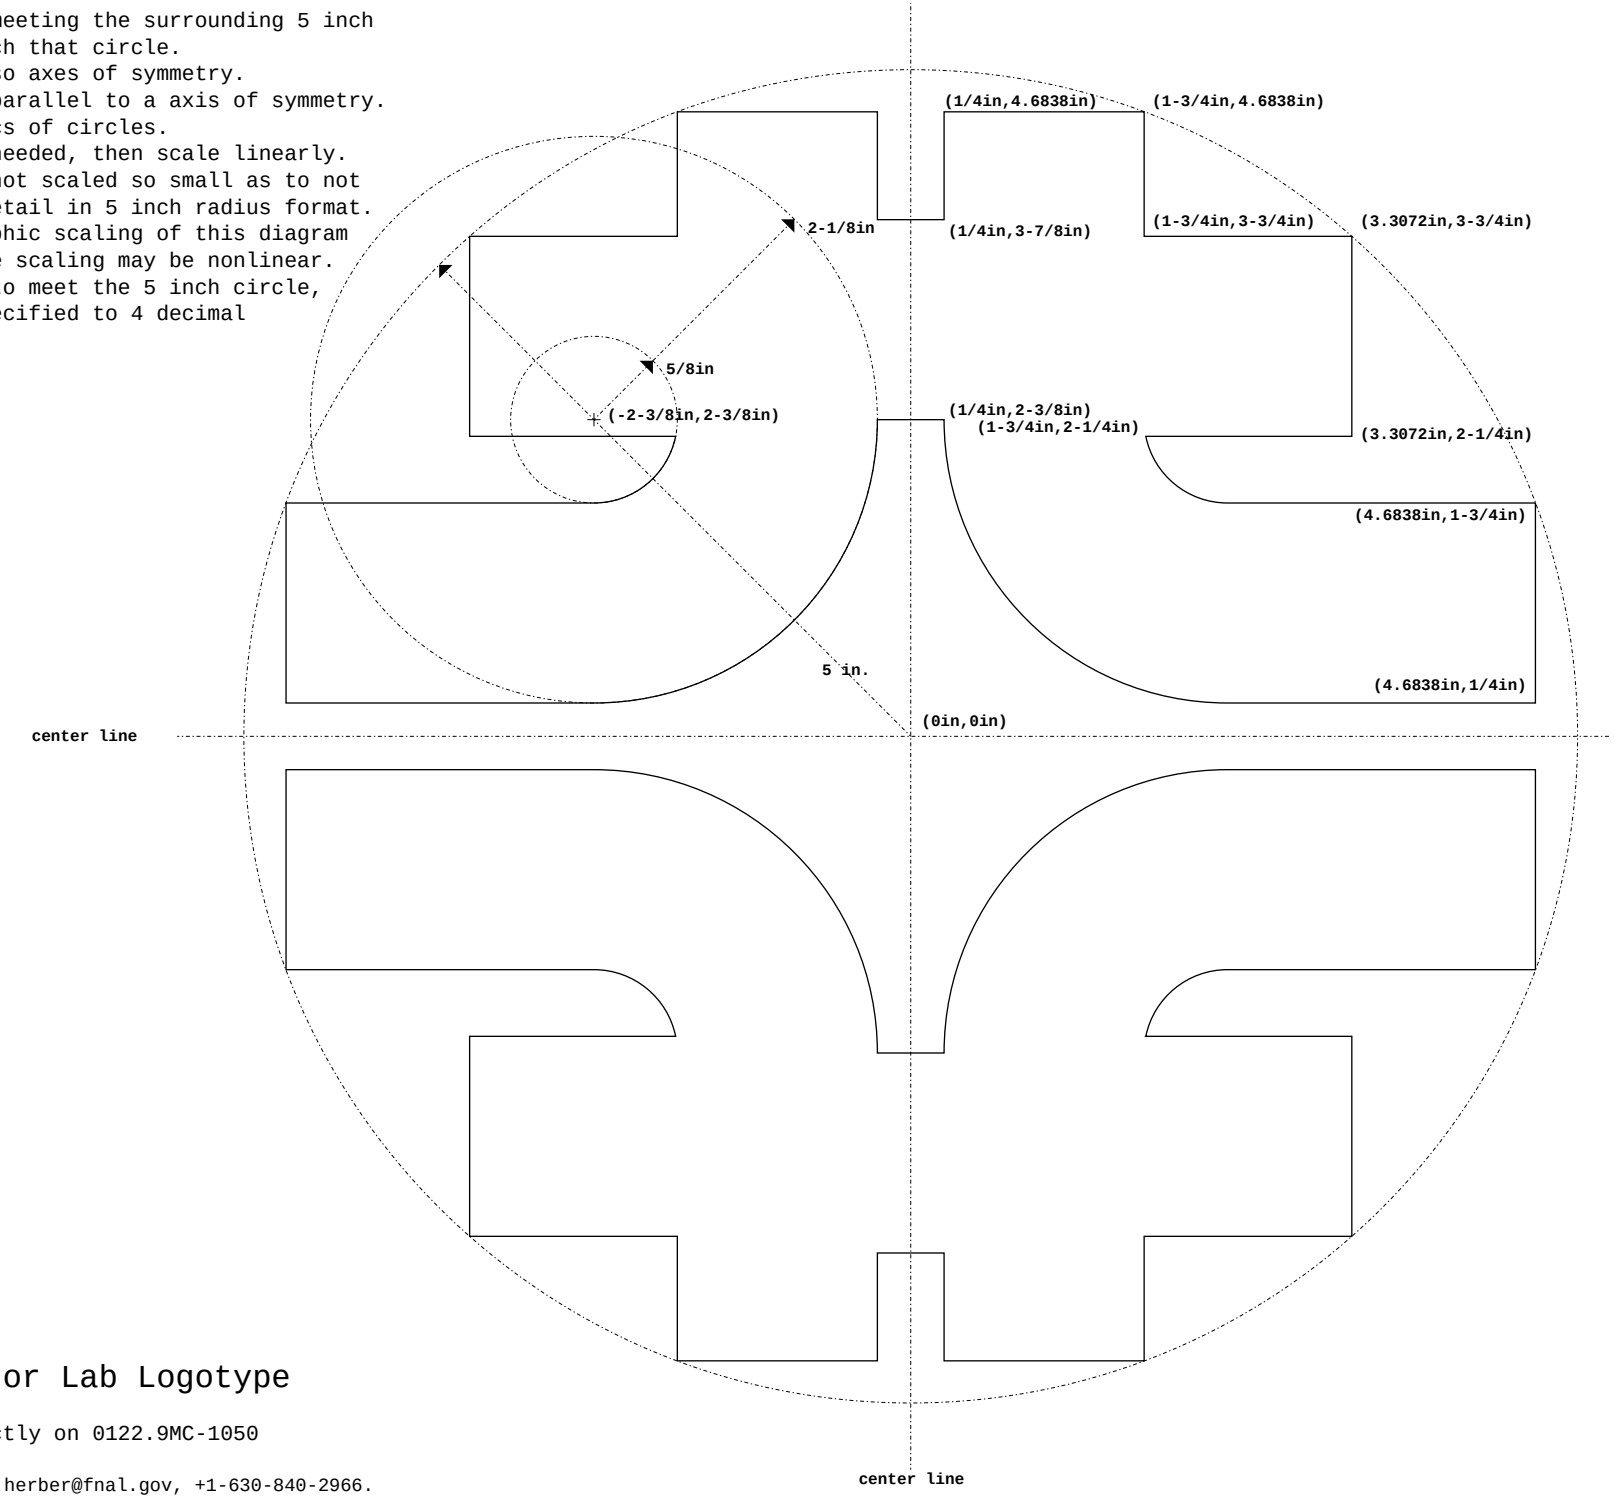
1. All corners apparently meeting the surrounding 5 inch circle must in fact touch that circle.
2. The center lines are also axes of symmetry.
3. All straight lines are parallel to a axis of symmetry.
4. All curved lines are arcs of circles.
5. If a different size is needed, then scale linearly. The logotype should be not scaled so small as to not show what is 1/8 inch detail in 5 inch radius format.
6. Photographic or xerographic scaling of this diagram is not recommened as the scaling may be nonlinear.
7. Due to the requirement to meet the 5 inch circle, some coordinates are specified to 4 decimal places of a inch.



National Accelerator Lab Logotype
